

Instructions

You need to use your mouse and keyboard to control the simulation

1. Switch between Cursor- and Flight mode

By pressing the "Tab" key, you can switch between flight and cursor mode.

The flight mode is used to explore the scene. It is shown by the text "You are in the Flight Mode" in the top bar and by a black crosshair in the middle of the window.

The cursor allows you to perform various actions. You can use the menu options or interact with the stations inside the simulation. It is shown by the text "You are in the Cursor Mode" in the top bar.

Instructions

You need to use your mouse and keyboard to control the simulation

2. Controls in Flight Mode

Use the mouse to manipulate the viewing direction. By moving your cursor around you can change the viewing direction.

Use the "WASD" keys to move around in the scene.
The key "W" is used to move you forward (viewing direction)
The key "A" is used to move you to the left (viewing direction)
The key "S" is used to move you backwards (viewing direction)
The key "D" is used to move you to the right (viewing direction)

If you hold the "X" key while moving, you will move only on the vertical axis (only the height will change)

If you hold the "Space" key while moving, you will move only on the horizontal axis (you can move freely on a constant height)

Hold the "Shift" key to move faster.

Instructions

You need to use your mouse and keyboard to control the simulation

3. Controls in Mouse Mode

Use the mouse to activate the menu elements or to interact with the stations inside the scene.

To interact with a station, press on a street sign that says "Station". A window will open, which shows the name of the station and a list of all public transport lines that use this station and route. If you select a public transport line from the list, all open stations will close and the selected public transport route will be marked accordingly. Furthermore, the simulation will generate bus or train models (depending on the chosen public transport line) which will move across the stations.

The search option in the top bar allows you to search through all available stations. Enter the name of a station and confirm your entry by pressing the "Enter" key. A list of search results appears. There you can select your desired station. The simulation will teleport you to the target location and open the station window.
